

ICD CPO-CD® Recertification Service Options

CPO-CD® holders may choose to participate in service activities as part of their recertification activities.

Service activities may replace 9 hours of education credits.

Participation in service enriches our contribution to the population affected by CD, to our non-profit organization, builds skills and demonstrates understanding of CD issues.

Please note:

- 1) Candidates are responsible for keeping and maintaining their own records. The ICD requests documentation for verification purposes.
- 2) Service may be completed anytime in the three year period since your last certification or recertification.
- 3) Appropriate proof/documentation is required for service activity submission.
- 4) When submitting service activities with your recertification application, please gather all documentation into one document and attach it to your application.

Service may be focused in one of two areas, public or ICD. Each category of service offers possibilities in both areas.

- Public services focus on directly serving the population affected by Chronic Disorganization or another organization where the service will ultimately benefit the same. These services are to provide information to individuals affected by CD – not to promote your business or other interests.
- ICD services assist the ICD in maintaining quality educational programs, publications and opportunities to ICD subscribers and other related professionals.

**For questions regarding service activities not identified on the ICD Service Plan,
please contact the Certification and Services Director at ICD@ChallengingDisorganization.org.**

To recertify as a Level III CPO-CD® graduate, candidates may complete service in any category, consisting of either one activity in green or **two** activities in black print.
